BRADY®
WHEN PERFORMANCE MATTERS MOST™

Brady Workstation
Data Automation

Automate your labelling process.

Add information straight from your ERP-system (such as SAP®)

Brady Workstation Data Automation enables you **to easily integrate automated label printing in your workplace.**

The app is designed to be simple. You can automate your label printing in just a few clicks.

- Select a label template
- Indicate where the data should be placed
- Select your printer.

With Brady Workstation Data Automation you can import data automatically from your system onto a predefined label and send it to a specific printer, all without manually interfering.

Multiple channels

Brady Workstation Data Automation enables users to program 5 channels each including label data, a label template, a selected printer and a number of copies. Each channel can have a different label input location, label template and label printer assigned to it. Extra channels can be purchased via the Brady Workstation application platform.

Reduce time, errors and accidental label layout changes

With Brady Workstation Data Automation, users can fully control label printing from an ERP, LIMS or company database system. This will reduce the time needed for data entry and user training, and reduce the risk of accidental label layout changes throughout the label creation process.

Brady printers will notify users at their workstation when extra printer supplies are needed to complete a print job.

Software

| Article number	Order reference	Product description
146180	BWS - DA - CD	Brady Workstation Data Automation incl. 5 channels + LM6 on CD
146246	BWS - DA - EM	Brady Workstation Data Automation incl. 5 channels + LM6 Electronic Media

Brady Workstation

Brady Workstation is a freely downloadable application platform that enables users to select, purchase and install the apps they need. Free app trial versions are available.

Setup in 5 easy steps

1 **2** **3** **4** **5**

Watch Folder
Select a folder to watch for incoming CSV-data files.

Template File
Create a LabelMark 6 or Brady Workstation template.

Map Fields
Map fields.

Printer
Select a printer.

Start
Confirm and start the automation.
